Assignment 9/17: Project 1 M2, a multi-page site with effective structure and theme

This is milestone 2 of Project 1 (see @40). Your mission is to build a multi-page personal site with creative and effective information/navigation structure and design theme/metaphor before Tue Sep 17 at 3pm

You'll upload the next version of your site and a copy of your rationale.pdf in a folder P1M2 to the 1300 server. For most people this will build on milestone 1, although if you decide that a different site/goal is better, you can switch.

The site should contain multiple pages and effective linking between them that helps visitors get around. Pages should not be dead-ends; pages should be reachable; HTML should be clean and readable; and there should be significantly more content (not necessarily text).

The information organization and navigation structure should be tailored to your expected audiences, and there should be a distinct conceptual theme visible in the site and justified in the rationale.

In your rationale.pdf, you'll have done more thinking about your site goals, your audience, and your design goals. Be sure to explain how you came to the organization and content that you have here, how they meet your goals and are appropriate to your audience, alternatives you considered, and what the tradeoffs were behind your decisions. (You might think about which audiences and goals are supported well and which aren't, as we discussed in class on 9/9.)

You're encouraged to build off your prior rationale, and again, feel free to ask us specific questions to consider as we critique this version.

Upload the new site and rationale to the server using a folder named P1M2, and a copy of the rationale to CMS, by Tue Sep 17 3pm; that's our cue that you've done the assignment and it's ready to be graded.

P.S. You're encouraged to explore visual design ideas as well, though this is not yet required. Be careful not to get so caught up in the visual that you forget the content and organization, and that you don't fall too much in love with this visual design (in milestone 3 you'll be doing multiple visual designs).
